

Scope of Work

Architectural Landscape Design

I. Statement of Purpose

The purpose of these works is to plan a functional outdoor representational space. The house is a diplomatic residence that is frequently the site of formal dinners for up to 40 guests and receptions for up to 100 guests.

The purpose of renovating the existing landscape is due to an ill placed pool and its perimeter fence. The landscape then slopes from a lower elevation up to the pool, this sloped lawn is not conducive for hosting events. There is also a garden that can be better designed.

II. Bid Deliverables

The Landscape Architect Firm will need to submit: Previous work samples particularly related to landscape designs and construction oversight and references for such work.

III. Design Deliverables

Through the course of a site visit and discussion regarding the current ideas on how to achieve an affective outdoor representational space, landscape designs and blue prints will be delivered for approval.

IV. Construction Oversight

Once funding has been approved for the landscape A&E firm will be required to provide construction oversight as Quality Control agent and to assure construction is done as per drawings and specifications.
